NORSKE™

DRIVER BIT
CATALOGUE

**INDUSTRIAL
RATED**

Focused on leading the industry in precision, performance and innovation, Norske™ Tools manufactures Screwdriver Bits and Accessories for professionals who demand ultimate precision and maximum performance.

Norske™ Tools offers a full line of heavy duty impact torsion insert bits, bit holders, nutsetters, socket adapters, and more. All driver bits and accessories are designed exclusively for use with high-torque impact drivers and feature our advanced **Flex Tech Torsion Technology**, built to absorb high torque stress while reducing bit fracture in high torque applications. Norske™ torsion driver bits and accessories are made from Hardened S2 Modified Impact Resistant Steel for extended life and are guaranteed to last on the most demanding job site applications.

TORSION BITS EXPLAINED

As industry evolved from low-powered drills to modern-day impact drivers, the standard screwdriver bit was not equipped to withstand the heavy torque loads generated by modern-day impact drivers. These advances now provide greater and more consistent power. The amount of rotational force that impact drivers deliver requires a bit to withstand excessive torsional stress to avoid breakage and failure.

Better for use in heavy torque applications where standard bits will break, impact torsion bits feature a reduced diameter round portion often referred to as the **TORSION ZONE**. This optimized **TORSION ZONE** flexes under load to take pressure off of the bit tip and reduce bit fracture resulting in less breakage and increased service life. This is achieved through the shape of its thinned-out shank, effectively transferring the excessive stress away from the tip to the torsion zone.

IMPACT TORSION

DRIVER BITS

NORSKE™ IMPACT TORSION driver bits are engineered to meet the rigorous demands of professional and industrial users. The optimized **FLEX TECH TORSION ZONE** flexes under load to take pressure off of the bit tip and reduce bit fracture resulting in less breakage. Our Proprietary tool steel and heat treatment process provides maximum strength and durability to handle a new generation of higher torque impact.

Innovatively designed **FLEX TECH TORSION ZONE** absorbs high torque stress and reduces bit fracture

Hardened S2 Modified Impact Resistant Steel for extended bit life
